Good Vibes Fast Food Billing System

Good Vibes Fast Food Restaurant wants to automate its order-taking and billing process. The restaurant serves a variety of fast food items, and customers can view the menu, place orders, and receive a bill based on their purchases.

The billing system should:

1. Display a menu with item names and prices.
2. Allow customers to select items and enter the quantity.
3. Provide an option to order additional items.
4. Apply discounts based on the total bill amount:
   - **2% discount** if the bill is above ₹301
   - **4% discount** for bills between ₹301 - ₹600
   - **8% discount** if the bill exceeds ₹601
5. Add a **5% tax** to the final bill.
6. Display the total amount payable.

Develop a Python program that implements this billing system and ensures a smooth ordering experience.
